

CLAIM

What we claim as our invention is: When the seven (7) major ingredients of "Pearl Blue", a topical pain relief cream or lotion, are properly combined, those ingredients being: 1. Lidocaine HCL, 2. Trolamine Salicylate - aspirin, 3. Aloe Vera, 4. Sweet Almond Oil, 5. Menthol, 6. Oil of Wintergreen - Gaultheris procumbens, 7. Tea Tree Oil - Melaleuca, that they all work both individually and together in their respective categories, according to each items ability to penetrate to the pained area according to its own time of penetration to produce pain relief starting in minutes and lasting hours according to each individuals own body chemistry to be thus fast acting and long lasting. I have minimized the particular quantities of each ingredient, indeed, increasing the amounts may aid pain relief of specific injuries, and we are even now experimentally adding other ingredients, to the "Base" or the original 7 ingredients. The "Base" ingredients work well, although adding other ingredients to this "Base" may help, without the "Base" they, on their own, would not perform as well, so by adding other ingredients to the "Base" 7 ingredients, or varying their individual amounts should be considered an infringement of this patent process.

I. We believe the combination of the seven ingredients above listed as 1 thru 7 to be both unique and original and thus request a patent be granted to us to protect this highly successful formula.

II. We believe the 2 ingredients, Lidocaine HCL and Trolamine Salicylate, combined and used as a topical pain relief lotion or cream to be also unique and original, and request

patent protection for his combination used as stated.
